

PVC CORNER BEAD ETIX 5506 (6/43x43mm)

The corner bead is used to protect right-angled external corners from mechanical damage.

Corner Bead	Corner Dimensions (mm)	Thickness (mm)	Length (m)	Packaging (pcs)
ETIX 5506	43x43	6mm	2,5	50

ADVANTAGES

- Protects the external corners of doors and/or windows from mechanical damage
- Reduces the time needed to create corners
- Helps prevent cracks at external corners
- Protects wall corners from mechanical damage
- Suitable for various types of plaster
- More resistant to handling damage (dents, bends, etc.)
- Corrosion-free profile
- Suitable for 6 mm plaster thickness

INSTALLATION

Install the corner bead before plastering the wall. The surface where it will be installed must be smooth and even. Apply a layer of plaster to the outer surface, then press the PVC corner bead into the plaster. Ensure a small gap remains between the corner bead and the floor. Gradually cover the corner bead with plaster until a seamless surface with the wall is achieved.

MATERIAL

PVC.

STORAGE

Store in a horizontal position. Keep in a dry place and protect from moisture and mechanical stress.
